Sample Handicap Analysis in TM-Club

BILL SCAPLEHORN	White (121.0 / 68.4)	18.3	15

We are calculating a course handicap for **All 18** holes.
The initial index is **18.3**. The index is unaffected by the maximum index setting.
This player is on the **White** tee, the rating is 68.4 and the slope is **121**.
We calculate the course handicap as **index * slope / 113 = 18.3 * 121 / 113 = 19.59**. After rounding, it is equal to **20**.
We apply a handicap adjustment percentage of 90%. Before rounding, the course handicap is **18.0**. After rounding, it becomes **18**.
Since the player is playing from a different tee than the unadjusted tee, and you are using rule 3-5, we need to adjust the course handicap. The difference in rating between the **Blue** and the **White** is **-3.3 strokes**, which rounds to -3. Adjusting for this, the course handicap becomes **15**.
The player handicap is unaffected by the maximum handicap setting.
